WINDESIGN

CLOTHING COLLECTION

CLOTHING | BAGS | ACCESSORIES

Our sailing apparel is crafted from high-performance fabrics, each carefully selected with the sailor in mind. Whether it is superior waterproof protection, flexible and warm neoprene, or lightweight UV-resistant materials, every piece delivers reliable protection, comfort, and freedom of movement in all conditions on the water.

The logos below provide a clear overview of our key materials and their unique characteristics. These icons also appear in our catalogue at our clothing items, making it quick and easy to identify the features you need. Whatever you choose, you can be confident that our products meet the highest standards of quality and reliability.

2 LAYER

2-Layer fabric combines a durable 75D twill polyester pongee outer with a PU-coated inner layer. This smart construction delivers a waterproof rating of 10,000 mm and breathability of 10,000 g/m²/24hr, keeping you dry and comfortable in all conditions.

WFLEX

W-Flex stands for our neoprene flexibility. This material combines high-quality neoprene with specialized manufacturing techniques to achieve superior elasticity and consistent stretch, ensuring unrestricted movement and reliable comfort during active sailing.

AIR MESH

AIR MESH fabric wicks away moisture and promotes airflow, keeping you dry, comfortable, and fresh all day on the water.

NEO-SKIN

NEO-SKIN fabric is a 3-layer neoprene fabric consisting of a water-repellent nylon outer, a lightweight stretch mid layer and a soft nylon inner layer.

RIPSTOP

Ripstop fabric features a unique grid of reinforced threads that prevents small tears from spreading, boosting durability and longevity.

TERRY

Terry fabric is soft, warm, and quick-drying, with a looped construction that absorbs moisture while keeping you comfortable against the skin.

3 LAYER

3-Layer construction features a 75D twill polyester pongee outer, a PTFE membrane, and a bonded 30D tricot inner layer. Engineered for demanding conditions, it provides a waterproof rating of 20,000 mm and a breathability rating of 15,000 g/m²/24hr for reliable all-weather performance.

W/P MVP

W/P - MVP indicates a fabric's waterproof rating (W/P) and moisture vapor permeability (MVP), providing clear information on water resistance and breathability.

MESH##LINING

Mesh Lining provides a comfortable, breathable layer that reduces stickiness and makes changing clothes easier, keeping you dry and ready to perform.

UV50+ SKIN

UV50+ SKIN is a high-performance fabric offering UPF 50+ protection, effectively shielding the skin from harmful UVA and UVB rays during long hours on the water.

STRETCH-SKIN

STRETCH-SKIN is a high-stretch fabric designed to enhance mobility, comfort, and functional fit, providing reliable performance during active sailing.

POLAR

POLAR is a soft fleece fabric offering superior insulation, moisture-wicking capabilities, and good breathability, ensuring warmth and comfort for all-day performance.
